DETAILED ACTION

Applicants' amendments to claims filed 3/29/2010 have been entered. Claim 1 has been amended and claims 13-15 have been added. Claims 1, 3-15 are allowed.

EXAMINER'S REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The invention as claimed recites "A composition for deep fried food, comprising: polysaccharide powder having an average particle size of 20 gm or less, wherein the polysaccharide is selected from the group consisting of guar gum, pectin, xanthan gum, alginic acid and carboxymethyl cellulose, and the polysaccharide powder is obtained by subjecting the polysaccharide to jet pulverization or freeze pulverization wherein the composition imparts to deep fried food, reduced oil absorption, increased mouth feel and increased taste as compared to a composition comprising a polysaccharide powder having an average particle size of more than 20 gm and not being subjected to jet pulverization or freeze pulverization."

The closest art of record, cited in the office action sent on November 27, 2009, are Takahashi et al. (US 2002/0001659 A1) in view of Krawczyk (US 6025007).

Takahashi teaches of an oil absorption retarding composition for improving the quality of the same deep fried food prepared without said composition, comprising a polysaccharide powder having an average particle size of 100 μm or less wherein the polysaccharide added includes alginic ester, alginic acid, pectin, xanthan gum, guar gum and carboxymethyl cellulose, hereinafter, CMC (Publication, page 2, paragraphs [0018]). Regarding the particle size Takahashi teaches of particle size of the powders to be equal to or less than 100 μm (Page 2, Para [0023]) and 20 μm as particle size (Page 4, Tables 5 and 6). Takahashi does not teach that:

- the particles of polysaccharide are obtained by jet pulverization or freeze pulverization,

Art Unit: 1781

- alginate but teaches of alginate ester as retardant for oil absorption.

Obviousness rejection was made for particle size selection, however, applicants have provided specific evidence by way of declarations with data that supports unobviousness of the invention as claimed.

Declaration by Mr. Hiromichi Kouno of 7/17/2009 provides specific results regarding Guar gum, Pectin and alginic acid were divided in three categories each

- i) where the polysaccharide particles were used as commercially available without pulverization (Powders A-1, A-2 and A-3))
- ii) where the polysaccharide particles were the polysaccharides were pulverized as per the claimed invention (Powder B-1, B-2 and B-3)
- iii) where commercially available polysaccharide was classified with a sieve having an opening of 20 microns (C-1, C-2 and C-3) and the results clearly show that doughnuts with the freeze or jet pulverized polysaccharide had least fat absorption in the food product, i.e. doughnut. Thus, the evidence clearly showed that jet or freeze pulverized polysaccharide powders with average particle size of 20 microns or less reduces fat absorption of deep fried foods.

Regarding the specific difference between alginic acid (as claimed) and alginate ester (Takahashi) the second Declaration by Mr. Hiromichi Kouno of 9/18/2009 provides specific results regarding alginic acid vs. alginate ester, where each of the polysaccharide particles have an average size 20 microns or less in and have been pulverized. Results table on page 4 of declaration shows reduced fat absorption in doughnuts where the polysaccharide was alginic acid (claimed invention) as compared to alginate ester (Takahashi).

Regarding the process limitations of the product claim, it is noted that applicant has provided evidence that clarifies that the freeze or jet pulverization process step imparts distinctive fat absorption characteristics to the final product, i.e., the structure implied by the process steps should be considered when assessing the patentability of product-by-process claims over the prior art, especially where the product can only be defined by

Art Unit: 1781

the process steps by which the product is made, or where the manufacturing process steps would be expected to impart distinctive structural characteristics to the final product. See, e.g., *In re Garnero*, 412 F.2d 276, 279, 162 USPQ 221, 223 (CCPA 1979). Thus, applicant's evidence renders the invention as claimed unobvious and free of prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
